

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

warm Oil. Last of all he mentions the great Secret of the *Viper-catchers*, that is, the Fat of *Vipers*; which, he thinks, acts in the same manner as the *Olive-oil*.

---

VII. *Abstracts of two Letters from M. Dufay, F. R. S. &c. to Dr. Mortimer, Secr. R. S. concerning the Efficacy of Oil of Olives in curing the Bite of Vipers.*

*Part of a Letter from Monsr. Dufay to Dr. Mortimer, dated at Paris, Aug. 8. 1737. [Translated from the French, by T. S. M. D.]*

AFTER I had given the Academy an Account of your Observations on the Remedy against the Bite of *Vipers*, a Committee was appointed to make the same Experiments here. But whether it be, that our *Vipers* are more venomous than yours, or that the Bites were more considerable, of the several Pigeons and Fowls that were bit, not one recover'd, though they were immediately rubbed with Oil. They died in a Quarter of an Hour, or in an Hour's time at farthest. The like Experiments have been made on several other Animals; but as the Gentlemen are resolved to repeat them, I do not send you an Account of them. All I can say at present is, that the Remedy seems to be not so sure here as in *England*, where I find by the publick News-papers, that a *Rattlesnake* has been lately brought, and that its Bite has been cured by the same Remedy.

*Signed,*

Dufay.

*Abstract*

*Abstract of a Letter from M. Dufay to C. Mortimer,  
dated at Paris, Dec. 11. 1737.*

\* \* \*

TWO Members of the Academy have been employed to make the Experiments relating to the Cure of the Bite of *Vipers*, and they have accordingly made some upon Dogs, Cats, Pigeons, Chickens, Ducks and Turkeys; some of which have been cured, but some others died notwithstanding this Remedy; and there were even some that did not die, though they were bit very deep, and yet no Application of *Oil* was made. This is the Report they have made us of these Experiments; and they are determined to make new ones. \* \* \* All that can be thought concerning the Difference of the Success of this Remedy at *London* and at *Paris*, as it seems to me, is, that all *Vipers* are not equally venomous; that all Bites are not perhaps equally easy to be cured; and, in a word, that the *Vipers* in *France* are more dangerous than those in *England*. Finally, the Sequel of these Experiments will probably teach us, in what Cases this Remedy may be applied in this Country, *France*.

I shall tell you a Piece of News: We have here made with Success the Phosphorus of *Kunckel*, as good and as fine as that of Mr. *Godfrey*: We made nine Drachms at the first Operation. If you care to have the Particulars, I shall readily send you them. \* \* \*
